

Name: MD Imran Nazir Uday

Id: 22303286

Currently I am in 6th semester. Learning DSA and solving problems on Code forces and LeetCode and learning Data Science side by side. In my previous semester I have done DBMS where I have learned about SQL, PHP, HTML, and CSS. I have basic understanding about JavaScript basics, Dom manipulation, basic understanding of node and Express and Python also.

Purpose of Doing this Course:

My Future goal is to become a data scientist. In this field I will use ML for my project. As far I know we can integrate ML with the web backend for implementing some new features. As I will be using python to build ML applications so it will be necessary to know about a backend technology for building better websites and implement the power of ML and data science into the website. As there has another option Flask for backend, I was thinking about learn that. In the meantime, this course announcement came and I got enrolled in these course.

If I say about "How much time can I give to this course?"

I think I can give about 7h - 7h: 30m in a week to practice Django. This is not enough I think But I will try to complete all the assignments and try to practice and understand these Technology fully.
